From Chaos to Coordinated Action

A 10-minute pitch for the system that turns messy group chats into structured, prioritized, human-centered execution.

Made with GAMMA

The Problem: Tasks Hidden in Conversations

Students don't miss deadlines because they're lazy — they miss them because **important tasks are buried in conversations they can't keep up with.**

Who is it for?

No clear ownership — tasks get lost in the noise

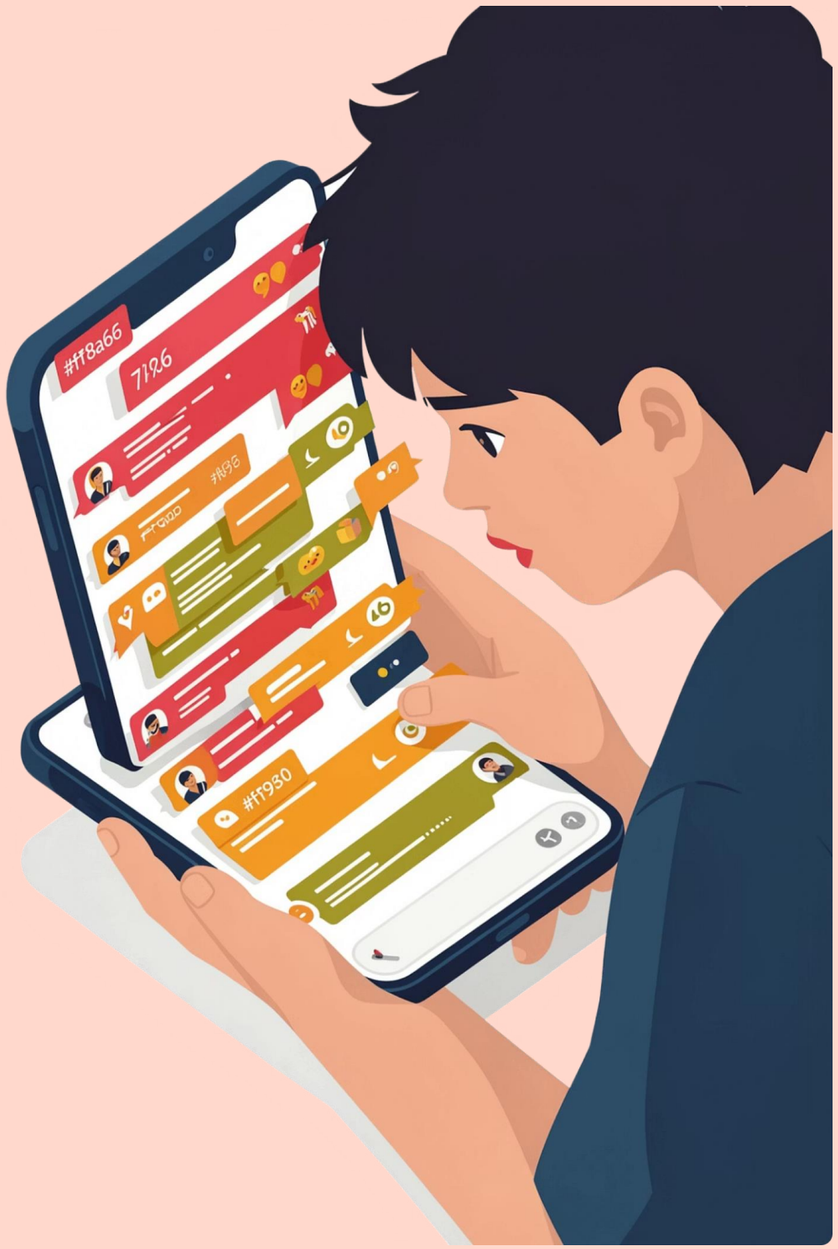
What matters?

Urgency is invisible when everything looks the same

When is it due?

Deadlines scroll away, unnoticed and untracked

And eventually... something gets missed.



The Solution: Conversations → Action

Upload a WhatsApp or Telegram chat, and our system goes to work — automatically and intelligently.

Detect participants

Everyone in the conversation is identified

Choose your identity

You select who you are in the group

Extract & assign tasks

Tasks are pulled out, attributed, and structured

Decide what's next

The system helps you act on what matters most

Made with GAMMA

Live Demo: Structured Tasks at a Glance

📂 Upload & Filter

Upload a chat file and select a timeframe — e.g., the last 7 days — to focus on what's recent and relevant

🕵️ Identity Selection

The system detects all participants; you choose who you are to personalize your task view

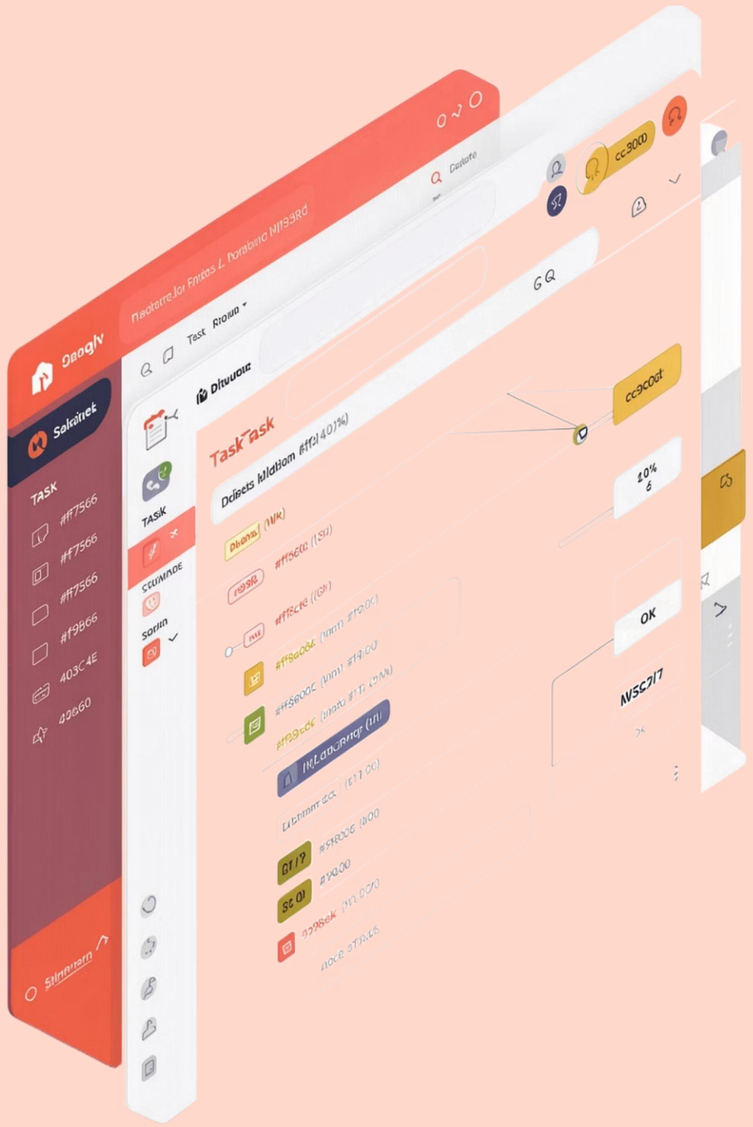
✅ Task Breakdown

Each task shows description, who assigned it, who's responsible, and detected deadlines

🔍 Team Filter

Filter by team member to focus on specific responsibilities or review the full team workload

> We make responsibility visible.



AI Intelligence: Beyond Extraction

Most tools stop at *extracting* tasks. Our system goes further — **it makes decisions.**

The AI classifies every task into one of four urgency levels based on conversational context — words like *"ASAP"*, *"urgent"*, or approaching deadlines all factor in.

> These are **recommendations**, not mandates. Users can always adjust urgency based on their own situation.

The AI also generates **step-by-step instructions** for each task and estimates how long it will take to complete.

> We don't just tell users *what* to do — we help them understand *how* to do it.

The Wow Moment: We Don't Guess

What most systems do

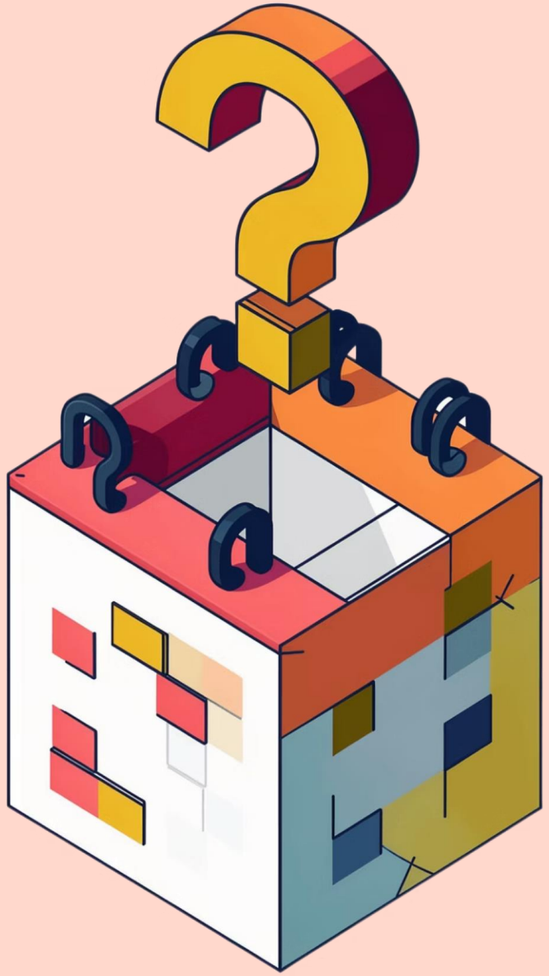
When a task has no deadline, most tools either **ignore it** or make an assumption — introducing risk and inaccuracy into your schedule.

What our system does

When a deadline is missing, our system **asks.** A clarification prompt ensures nothing is scheduled incorrectly.

- No guessing
- No silent assumptions
- No false confidence

> We prioritize accuracy over assumptions.



Intelligent Scheduling + Calendar Integration

Instead of pushing everything into your calendar automatically, our system **makes intelligent recommendations** — and lets you decide.

AI suggests — users decide. Because real intelligence is knowing what NOT to schedule.

Recommended tasks flagged

High-priority items are surfaced with a clear explanation of why they matter

User approves scheduling

You choose what gets added — no clutter, no noise

Google Calendar reminder

Tasks are added with automatic reminders (e.g., 30 min before) so nothing slips through

Made with GAMMA

Workload Balance: Productivity Without Burnout

Productivity isn't just about getting more done — it's about doing the right things at the right pace.

Overload Detection

If too many tasks cluster in a short window, the system flags potential overload

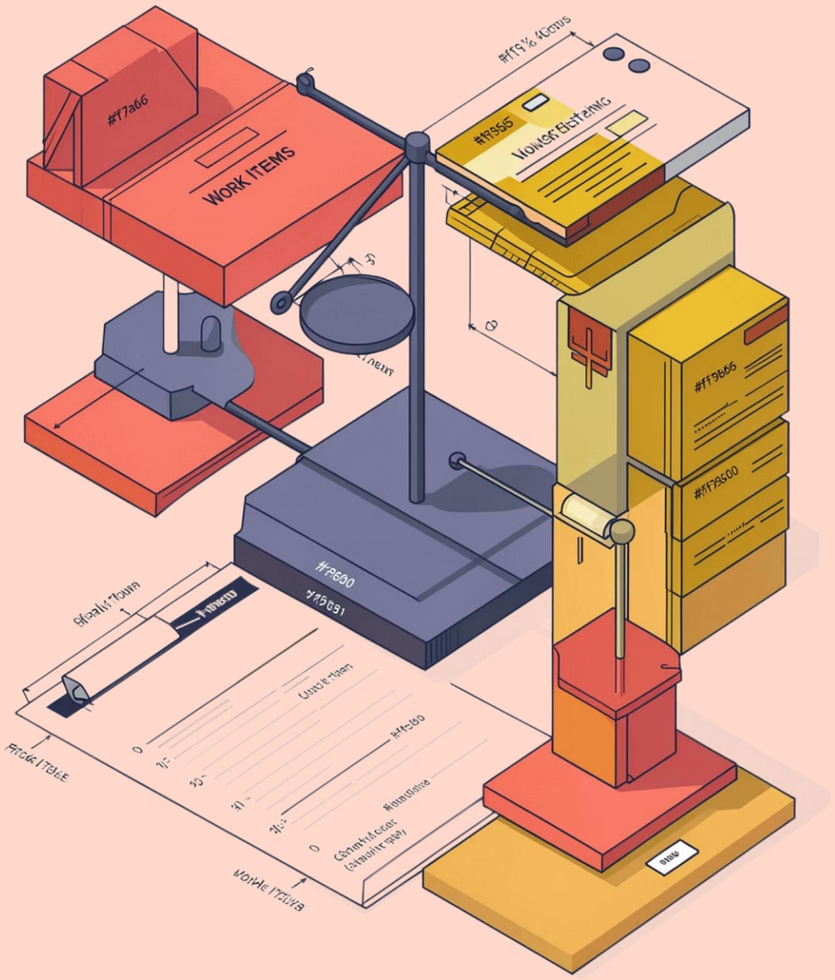
Smart Adjustments

The system suggests redistributing tasks for a more sustainable schedule

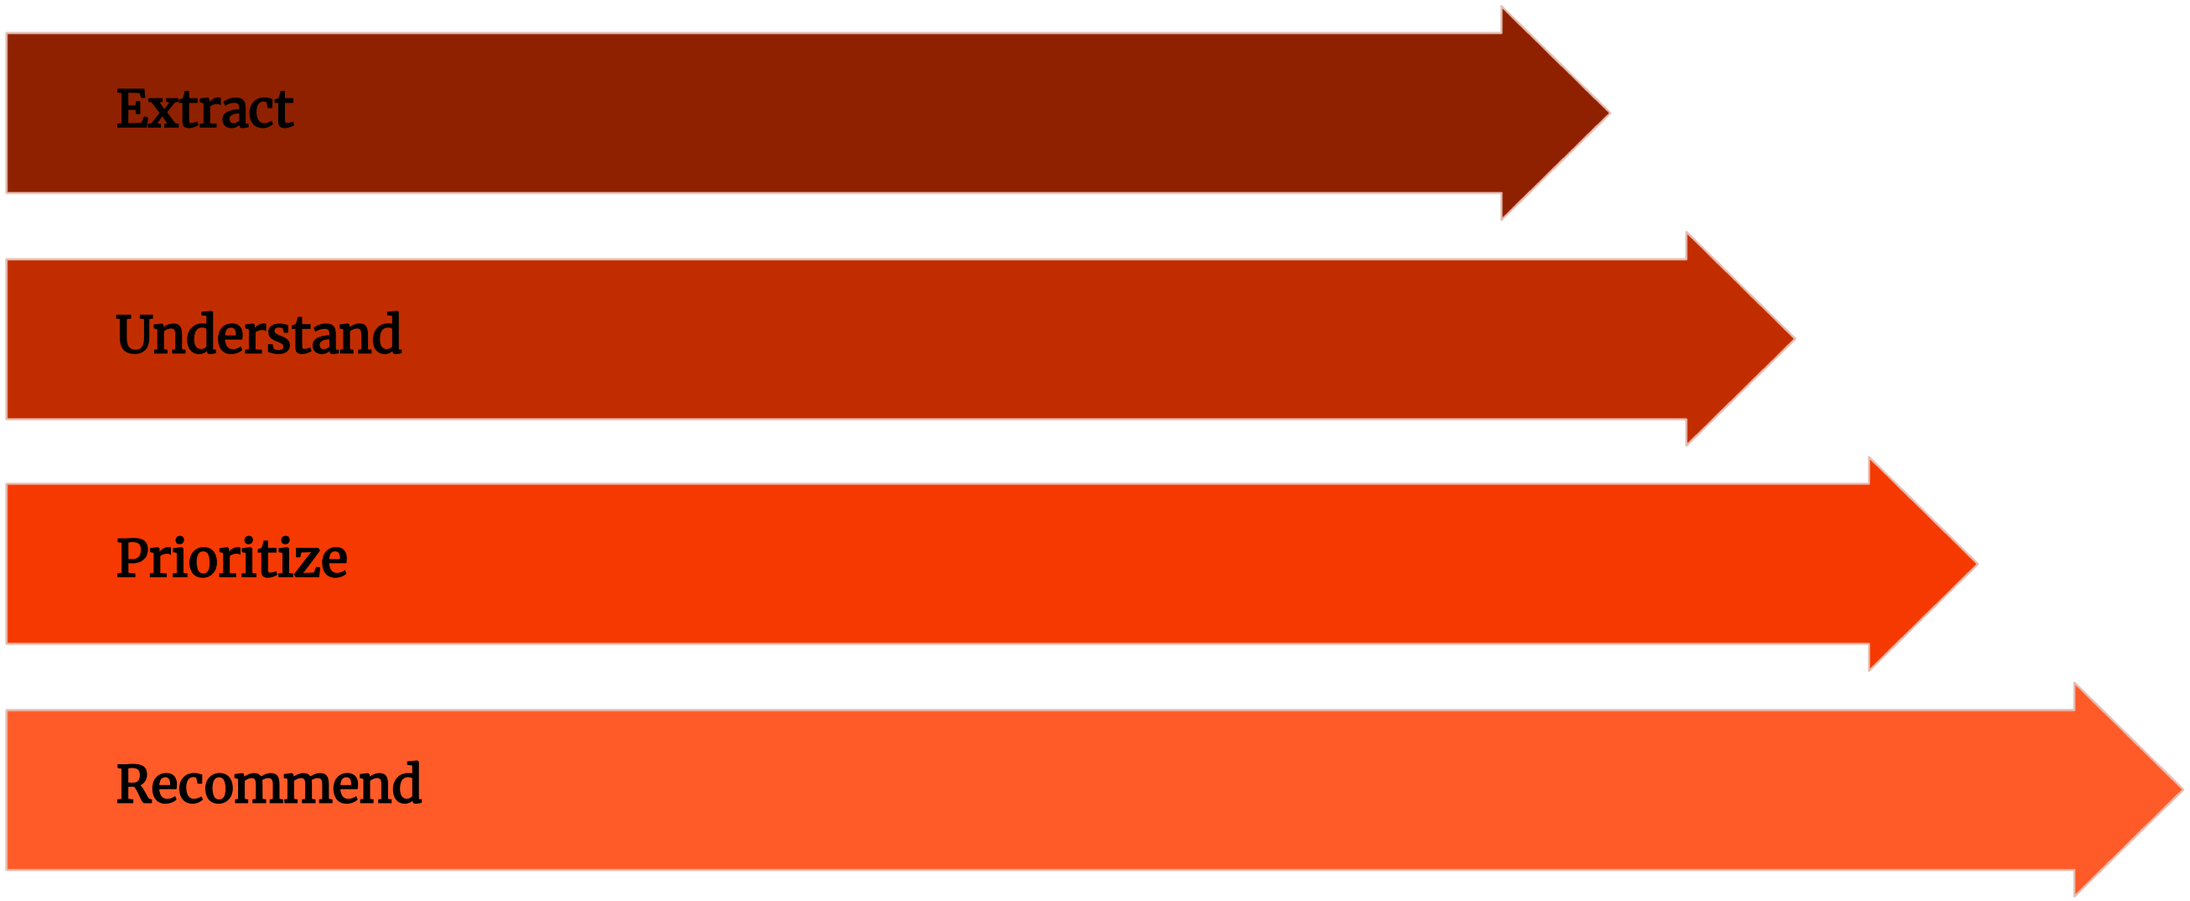
Life Balance

We design for wellbeing, not just output — your schedule should be livable

> We don't just improve productivity — we prevent overload.



Under the Hood: A Multi-Stage Pipeline



The system continuously adapts as new messages and information come in — keeping your task view current without any manual effort. Each stage builds on the last, transforming raw conversation into coordinated, human-approved action.

Made with GAMMA

This Is Not Just a Task Manager

It understands conversations.

From personal productivity to team visibility to intelligent decision-making — our system turns chaotic group chats into structured execution that reduces missed deadlines and prevents overload.

📂 Extract

Tasks from any chat

🧠 Understand

Context & urgency

📋 Prioritize

With AI reasoning

🚀 Act

Coordinated & confident

> We help users understand, decide, and act — without missing a thing.
